Freight Priced by Friday

Do freight indices or aggregate AIS predict shipping equity returns?

Linked research component | 5 November 2026

THE RESULT Same-week basket/index correlations are 0.37 in dry bulk and 0.33 in tankers. Adding port/equity features worsens the documented freight nowcast.

APPROACH

Lead-lag comparisons and rolling ridge nowcasts compare public freight and port information against simple baselines.

SCOPE & LIMITATIONS

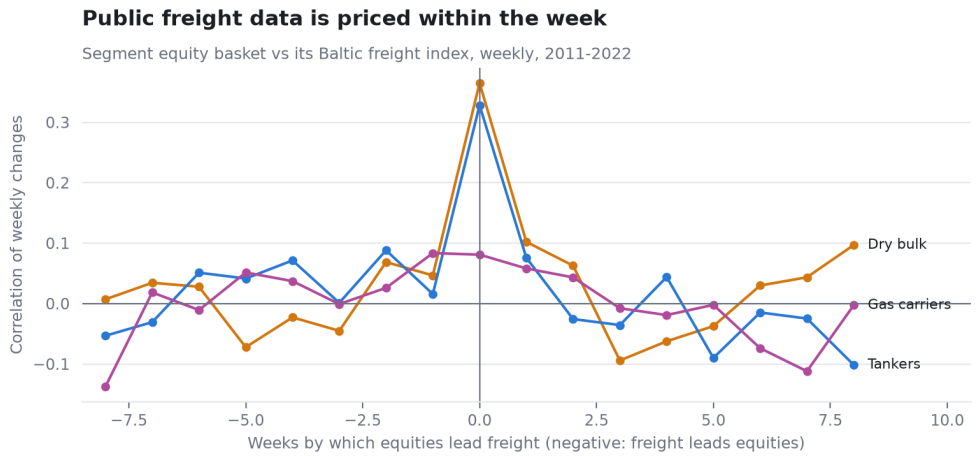

A null in these models is not proof of universal market efficiency. Frequency, sample choice and repeated specification searches matter.

WHY IT MATTERS

The practical result is a constraint on the research agenda: a contemporaneous relationship does not by itself supply a tradeable lead.

EXPLORE

Open freight_vs_equities.ipynb and freight_nowcast.ipynb.

Weekly relationships; see notebook for dates and specification.
