Shipping Filings Analyser

Do bookings disclosures contain information equities absorb slowly?

Linked research component | 5 November 2026

THE RESULT The repository reports 758 releases from 29 issuers. Booking-surprise rank IC is 0.26 with t=2.2 across 66 events; next-quarter bookings are extracted from only 16% of releases.

APPROACH

Deterministic patterns extract values with source sentences from HTML/PDF releases, flag quarterly changes and compare booking surprise with later relative returns.

WHY IT MATTERS

Each extracted figure retains its source sentence, supporting a manual check of both the number and its context in the release.

SCOPE & LIMITATIONS

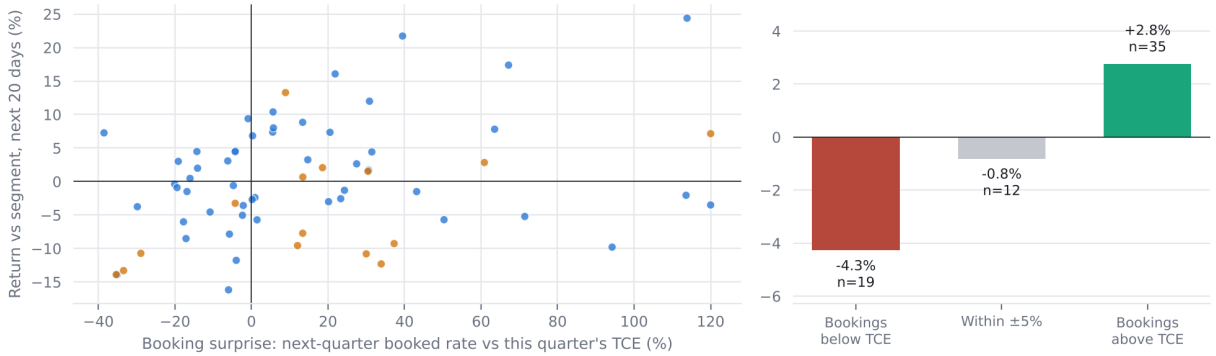

Small, tanker-heavy sample; the initial test was not committed before analysis. Sentence parsing misses tables and changing disclosure formats.

EXPLORE

Inspect filings_extracted.csv, its source columns and the live-test preregistration.

Bookings above this quarter's rate preceded outperformance

Results releases 2019-2026; stock minus its segment basket from the day after release

Exploratory sample; not pre-registered before initial analysis.
